

YOUR SPECIALIST FOR STAINLESS STEEL SURFACE CLEANING

Since our founding in 2021, we have drawn on the technological strength of HENKEL – an experienced industry partner that has been setting standards in stainless steel surface treatment since 1977. This trust-building connection gives our work technical depth and long-term stability.

We safeguard the value and performance of systems made of stainless steel and special alloys. Through precise maintenance, targeted surface optimization, and forward-looking consulting that identifies risks before they arise, we ensure consistently stable and safe processes. Our experienced team works directly on-site, developing solutions that flexibly adapt to your operational requirements. Quality, safety, and sustainable action are always at the core – so your systems operate reliably, remain optimally protected, and endure over the long term.

We protect the value of your assets.

Cleaning & Maintenance

- Extended service life and reliable system performance

Removal of corrosion and deposits

- Restoration of metallically clean surfaces with reduced particle contamination

Derouging & Repassivation

- Restoration of clean, passive stainless steel surfaces and improved corrosion resistance

Optimization of stainless steel and special alloy surfaces

- Improved cleanability (easy-to-clean) and reliable system performance

On-site service

- Flexible on-site surface treatment at customer facilities, meeting the highest standards of quality and occupational safety

Documentation & Traceability

- Comprehensive service and inspection documentation

Strong together Companies within the group

HENKEL is a specialist company for pickling, electropolishing, and the optimization of stainless steel surfaces, including cleaning, passivation, as well as the repair and sustainable improvement of technical surfaces.

www.henkel-epol.com

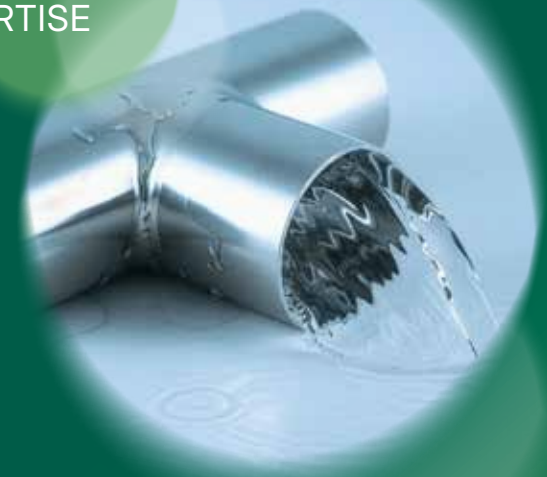

NIROPLAN is a chemical laboratory and engineering consultancy based in Austria, providing advice on surface and corrosion issues relating to stainless steel, as well as failure analysis, including remediation recommendations and the optimization of stainless steel surfaces.

Our precision cleans without compromise.

SURFACES
PURITY
EXPERTISE

www.corrgo.ch

www.corrgo.ch

Defined surfaces ensure the longevity of your systems.

Initial Cleaning & Passivation

Chemical removal of production residues to ensure complete passivation of stainless steel surfaces.

Derouging & Deblacking

Chemical removal of surface corrosion in high-purity media systems.

Descaling & Derusting

Fast and sustainable removal of limescale deposits and corrosion.

Technical Consulting

Expert advice on material selection, process optimization, and root-cause analysis in the event of process deviations.

Videoscopy & Microscopy

High-resolution inspection of hard-to-access areas using advanced endoscopic equipment and surface analysis via microscopy (also mobile).

Mobile Electropolishing

On-site electropolishing of stainless steel and special alloy tanks for surface optimization.

Sanitization

Chemical cleaning and disinfection of microbiological deposits and biofilms.

Laboratory Analysis

Rapid chemical and microbiological analyses, as well as clear technical assessments and presentation of results.
